PSPX48: a HP48 Calculator emulator v1.0.6 (minor update)

Hi All,

Here is a new version of PSPX48, the HP48 calculator emulator for PSP.

What's new in this version ?

1.0.6

- Save state is now done using zlib so ram file size is smaller
  and as a consequence, it is much faster to save
- Bug fix (may display stange characters in the emulator menu)

The HP48 documentation is there : user guide

As far as i know Helwet Packard graciously began allowing HP48 bios to be downloaded in 2000 (you need it, but it is NOT part of my PSPX48 package because it's not GNU !).

This rom can easily be found here : hpcalc
(you will have to rename it 'rom' (without extention))

If you want to discuss on this emulator, you can do it here :
zx81's forum on dcemu network

As always, the package is under GPL Copyright and sources are included.

PSPX48 v1.0.6

  Enjoy,

    Zx.
