GP2X-THOM: A TO7-70 emulator for GP2X v1.0.1

Hi All,

Thom is one of the best emulator of the Thomson TO7 home computer running on MacOS, Windows and Unix.

It has been initially written by Sylvain Huet in 1996 (see <http://www.sylvain-huet.com>), then Eric Botcazou (see <http://nostalgies.thomsonistes.org/>) continued this project and added many new features.

Here is a port on GP2X of the version 1.1.5, that I had previously ported to PSP.

How to use it ? Everything is in the README.txt file.

If you're looking for games and software have a look here :
[to7-70 games](#)

Here is a full working binary version :
[thom-v1.0.1-bin.zip](#)

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :
<http://www.gp32x.com/> or [dcemu network](#)

Hi Zx. The link isn't directing to the file. <http://zx81.zx81.free.fr/public/gp2x/thom/thom-v1.0.1-bin.zip>
This should be the one I guess

Thanks for porting this emu to the GP2X.

Oops, thanks, it's fixed now

Take care,

Zx

Great news; will try the release today!

We've added a link to www.linuxlinks.com to help spread the word.

Hi Steve,

Thanks for your comment ,

Cheers, Zx
