Want to port your homebrew to Fw-3X / PSP SLIM ?

For those who wonder how to port their homebrews to Fw-3x and PSP-SLIM, you will find here a very simple "hello world" homebrew, that can be compiled both for fw-15 and fw-3x,

here it is

Have a look to the README file for details.

This is a very simple example part of the SDK, it's only for coders, so no need to publish this stuff on your forums !!!

Hope that helps,

Zx

Im SURE that it will help . You are the best ZX . I will tell you if that coder can port the game to kernel 3.xx

THANKS!

Hi ZX81,
can you compile the latest psp dosbox from CrazyC to fw3.xx, please?
aTomiC on Oct 2 2007, 13:29

Hi Atomic,

The best is may be to ask him directly

Take care, Zx

Hi Zx,

I would like to develop some homebrew, and I'm looking for help. I tried LUA, and it works fine. But I'd like to work directly with the psp. So, can you help me?

How do I compile this hello world example?. I'm an electrical engineer, so I new a few things about programming, but need the basics to get started, and where to find the information,

Thanks you so much,

Hans

Hi Hans,

Most of all informations are there : <http://ps2dev.org/>
If you need any tutorials you may try there : <http://www.devsgen.com/psp/index.php?board=15.0>

(it's a french/english web site, providing info about c/c++ programming on PSP).

Take care, Zx

there is a strong need for
psftp v1.0 to be
ported to 3.xx..
