PSPTHOM: A TO7-70 emulator for PSP v1.1.0 (IR + SLIM)

Hi All,

Here is a new version of PSPThom the emulator of the Thomson TO7 home computer !

For those who haven't seen previous versions, Thom is one of the best emulator of the Thomson TO7 home computer running on MacOS, Windows and Unix.

It has been initially written by Sylvain Huet in 1996 (see <http://www.sylvain-huet.com>), then Eric Botcazou (see <http://nostalgies.thomsonistes.org/>) continued this project and added many news features.

What's new in version 1.1.0 :

- IR keyboard support !
- New speed limiter function
- Add option to display fps rate
- Now compatible with custom firmwares 3.x and PSP-slim
- Add a simple intro splash screen
- Option to prevent the blue led to be displayed when L or R are pressed
- Support iso8859-1 fonts in print text functions (might be useful to translate menus in german, french ...)
- Bug fix and code cleaning

How to use it ? Everything is in the README.txt file.

Sources are included, and this package is under the GNU public license, read COPYING.txt file for more information about it.

Hey, great work you do i had a question about this emu though.

I load a game with (k7) then i press circle button a few times to get to the command line. When i run the "LOADM" command i get 'searching' then "?IO error" on the next line.

Any ideas what i am doing wrong?

Happy user on Feb 22 2008, 05:43

Here is the way to load k7 on T07 :

<http://www.di.ens.fr/~mine/mess/to7.html.en>

You may have to use LOADM,,R for binary file or RUN"" for basic file,

Zx
