### PSP GNU CHESS: Chess game for PSP v1.0.3

Hi All,

GNU Chess is command line Chess program running on many different systems such as UNIX, windows or MacOS. It was started in 1986 by Stuart Cracraft, who is continuing to develop it with other coders such as Chua Kong Sian, Lukas Geyer, Simon Waters and David A. Wheeler.

PSP Gnu Chess use the GNU Chess version 5.07 for the Artificial Intelligence, and i've added a Graphical User interface.

How to use it ? Everything is in the README.txt file.

What's new is this version ?

- IR Keyboard support
- Add Option to highlight last move
- Display captured and promoted pieces
- Add virtual keyboard to enter PGN filename
- Load and Save PGN game file
- Fix joypad/pad speed issue

Sources are included, and this package is under the GNU public license, read COPYING.txt file for more information about it.

hi. i'm a noob programmer who's just stepped into the psp programming world.

i think this is a stupid question, but i'm having problems compiling this babe...

i've got a clean install of psptoolchain from the svn repo on a clean install of ubuntu 9.04 with the latest updates on vmware.

i am completely sure that psptoolchain was installed fine, because psp-gcc version prints all right.

but when i run makefile, my terminal spits out the message something similar to SDL/libtiff.h not found.

i tried apt-get install libsdl1.2-dev, but i'm still stuck on that error...

if you could give this noob a hand, i will greatly appreciate it.
