## **GP2X-CAP32: Amstrad CPC Emulator for GP2X v1.3.0**

Hi All,

For those who haven't seen previous versions, Caprice32 is one of the best emulator of the Amstrad CPC home computer series running on Windows and Unix, written by Ulrich Doewich. This emulator faithfully imitates the CPC464, CPC664, and CPC6128 models (see caprice32 project)

What's new in version 1.3.0 :

- Games on disk are now automatically loaded on startup !
- Menu to explore the disk content and possibly load files with Basic RUN" command
- Add several news options such as one to display (or not) the border
- Code cleaning

How to use it ? Everything is in the README file.

This package is under GPL Copyright, read COPYING file for more information about it.

Here is a full working binary and source :

cap32-v1.3.0-bin.zip

cap32-v1.3.0-src.zip

Special thanks to KaosOverride !

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :  
dcemu network or <http://www.gp32x.com/>.

WOW !!!

Great surprise zx81, i have tried this version, the options for load the disk is good, now the emulation is more stable, many games to 200Mhz have a speed of 42 Fps to Frameskip 0, great release.

P.s. I have tried the TV-OUT, and i can see to 200Mhz frameskip 0, the FULL SPEED to a 50 Fps, i don't understand why there is problem, however thank you.

Haven't updated this in a while and was very pleasantly surprised by the quality of this release. Very compatible, fast and lots of options. Love the auto load disc. The save state option with snapshot is a very tasty bonus.

Thank you for bringing it to the GP2X!

This is really good, especially the user interface and the emulation is great. Thanks for putting this together, ZX81.
