**PSPBEEB: BBC Micro Emulator for PSP v1.1.0 (SLIM + IR)**

Hi All,

Here is a new version of PSPBEEB the BBC Micro Emulator for PSP.

For those who haven't seen previous versions, BeebEm is a famous emulator of the BBC Micro computer series running on both windows and unix. (see beebem)

Originally developed for UNIX systems in 1994 by David Alan Gilbert, it was then ported to windows by Richard Gellman and Mike Wyatt in 1997.  At the start of October 2005, David Eggleston started porting the current Windows version of BeebEm (version 2.3) to FreeBSD.

What's new in version 1.1.0 :

- Speed improvements (but still slow < 40 fps)
- IR keyboard support !
- Now compatible with custom firmwares 3.x and PSP-slim
- Display and save thumbnail images for each save state
- Add option to display fps rate
- Add a simple intro splash screen
- Analog pad can now be used in the file requester
  to move faster through the disk/state lists
- Option to prevent the blue led to be displayed when
  L or R are pressed
- All render modes use GU (smooth mode)
- Support iso8859-1 fonts in print text functions
  (might be useful to translate menus in german, french ...)
- Major bug fix in video emulation functions (psp freeze ...)
- Other bug fix and code cleaning

How to use it ? Everything is in the README.txt file.

Sources are included, and this package is under "Beebem" licence, read COPYING.txt file for more information about it.

pspbeeb-v1.1.0-fw15.zip

pspbeeb-v1.1.0-fw3x.zip

pspbeeb-v1.1.0-src.zip

 Enjoy,

    Zx.

If you want to discuss on this emulator, you can do it there :
zx81's forum on dcemu network  or zx81's forum on qj.net

Hi, I have a psp v3.9, I have installed pspbeeb-v1.1.0-fw3x.zip following the read me instructions.  The psp recognises the program, but when a game is loaded and attempted to be played it says " game cannot be started (8002014" are you able to help me out? thanks
　Anonymous on Dec 22 2008, 20:12

You need a custom firmware to get it working ...

Wonderful emulator, very usable. I like how the keyboard is mapped with the buttons and the joypad of the PSP, and you can switch between mappings with L/R buttons in-game.

I´m already playing Exile on my psp
　Ldg on Apr  8 2009, 03:37

wow just discovered tis in 2012. Gives my psp a new lease of life.
cheers.

I don't suppose you are thinking about making an android port of this for the JXD?

The only BBC Emulator for android currently is not very good. It's slow and doesn't allow your own games, or controls.
　Kris on Mar 15 2013, 18:52

Quick question, When using on PSP, all of the different screen settings do not have correct alignment. Any reason why?

Thanks
