Dingux-2600: Atari 2600 emulator for Dingux v1.1.0

Hi All,

Stella is one of the best emulators of Atari 2600 game console, running on many different systems, such as Linux, Solaris, Windows, MacOS/X, WinCE, OS/2, GP2X.

It has been written initially by Bradford Mott, see Stella site for details.

Here is a port on Dingo/Dingux of the version I've previously ported to GP2X-Wiz

Many new features have been added compared to original Stella version, have a look to the README for details.

Here is a full working binary version :
dingux-2600-v1.1.0-bin.zip

And the source code :
dingux-2600-v1.1.0-src.zip

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :
My forum on dcemu network or <http://www.gp32x.com/>.

Thanks, works fantastic, just like ColEm, tried some games like Robot Tank and Centipede, all run Fullspeed. Any chance of porting an Atari 800 Emulator to Dingux, that would be awesome and your Emulators are very fast and have a fantastic interface.

Have a nice day Chris23235

Hi Chris,

Thanks for your comment. I plan to port all my Wiz stuff to dingo, so atari 800 should come soon

Also very happy with your work on the dingo. I'm using your emus for a long time first gp2x later on a psp. Now I'm waiting for my new dingo. Hoping the intellevision also gone work on it. (my very first gaming console, and my first computer was the zx81, with the big 16k memory upgrade)

Hi,

I do plan to port all my emu to both Wiz and Dingo ... It's just a question of spare time now
