PSPXTI: A TI-92 Calculator emulator v1.0.1

Hi all,

Here is a new version, with aqua skin.

PSPXTI v1.0.1 with sources

I like much more this skin

Enjoy,

Zx.

Just fucking great this emu!

I saw some info about this calc <http://www.wilbro.nl/ti92.html>, and it seems very powerfull.

My question, and I hope you will answer it, is if this TI-92 is stronger or comparable to the TI-83. I need that last one for school and it was stolen out of my bag

Is this calc going to spare me €100 or is the TI-83 never going to be ported.

Hi,

The TI-92 is much more complex (and so better ?) than the TI 83 ... But, it's more difficult to use it, there are 650 manual pages to read

And to answer your question, i won't release a TI 83 emulator,

Cheers,

Zx.

Tnx for your fast answer.

I understand you're not going to port TI-83 to... you've done enough great work on this one. I brought it in class today and my stupid math teacher didn't even know about a TI-92, so I told him to google it. I've played with this one for a bit and quite understand most of the things TI-83 can do too. With a bit of practice this is going to work fine i think. The only thing I still don't really understand is why it doesn't give me just normal answers without having to press the diamond key all the time.... Example:

8/3 = (without diamond key) 8/3

8/3 = (with " ") 2.7

Why didn't texas make it possible to let the calc use the second option standard (don't know what it's called in english), instead of always using the first, if you don't use the diamond key???

PS:

'd you think it's possible for a programming noob to port TI-83??

I would like to try it if it is do-able ..

Hi,

I've added a link to the TI92+ manual, it should be easier that way)

For a TI-83 emulator developpement, it's a very hard and long task for a noob. If i had to develop a TI 92 emulator from 0, it would have taken a long long time (not few days on my spare time).

Cheers, Zx

I already found a pdf manual, via your forum dcmu or someting.
But not being american or english, but Dutch, is giving some problems with really understanding the manual. Too bad there isn't just a way too enable diamond key all the time...

ciao

Hi

Here is the manual in english :
<http://www.smendes.com/ti89.pdf>

For the Diamond key, use the SELECT button of the PSP .
