Pandora-UQM : The Ur-Quan Masters for pandora

Hi All,

The Ur-Quan Masters, sometimes referred to as UQM, is a port of Star Control II for modern personal computers and operating systems from the original 3DO source code released to the fan community by Toys For Bob in August 2002.

After minor changes here is a port on pandora of the linux version v0.6.2 (i didn't take gp2x version, because i found it once my quick port was already done).

I haven't changed any key bindings, but you can always modify existing one with a keys.cfg in pandora/appdata/..../keys.cfg.

I've tested the LAN game mode, and it seems to work properly.

Here is a pnd version :
pandora-uqm-v0.6.2.pnd

Here is the source code :
pandora-uqm-v0.6.2-src.zip

Sources are included, and this package is under the GNU public license, read doc files for more information about it.

 Enjoy,

    Zx.

If you want to discuss on this homebrew, you can do it here :
My forum on dcemu network or http://www.gp32x.com/.
