Caanoo-2600: Atari 2600 emulator for Caanoo v1.1.0

Hi All,

Stella is one of the best emulators of Atari 2600 game console, running on many different systems, such as Linux, Solaris, Windows, MacOS/X, WinCE, OS/2, GP2X.

It has been written initially by Bradford Mott, see Stella site for details.

Here is a port on Caanoo of the version I've previously ported to Wiz.

I haven't any Caanoo, and I would like to thank Pedro De Quintana for his help on Caanoo beta-testing !

Here is a full working binary version :
caanoo-a2600-v1.1.0-bin.zip

The source code is here :
caanoo-a2600-v1.1.0-src.zip

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :
My forum on dcemu network or <http://www.gp32x.com/>.

I might be able to help in your quest for a caanoo. Just have to check with the wife first

Hi Dude,

Big thanks for your kind comment ! Anyway for now I'm using my Wiz to test with (it's not so different from the caanoo) and it works just fine.

Cheers, Zx
