Caanoo-THOM: A T07-70 emulator for Caanoo v1.1.0

Hi All,

Thom is one of the best emulator of the Thomson T07 home computer running on MacOS, Windows and Unix.

It has been initially written by Sylvain Huet in 1996 (see <http://www.sylvain-huet.com>), then Eric Botcazou (see <http://nostalgies.thomsonistes.org/>) continued this project and added many new features.

Here is a port on Caanoo of version that i had previously ported to Wiz, Gp2X and PSP.

How to use it ? Everything is in the README.txt file.

If you're looking for games and software have a look here :
to7-70 games

Here is a full working binary version :
[caanoo-thom-v1.1.0-bin.zip](#)

And here is the source code :
[caanoo-thom-v1.1.0-src.zip](#)

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :
My forum on dcmu network or <http://www.gp32x.com/>.
