Caano-Dropbear : SSH Server & Client for the Caano v0.52

Hi All,

Dropbear is a small SSH2 Server and Client running on a variety of POSIX-based platforms. It has been mainly developed by Matt Johnston (see matt's web site).

Scachi did a port to the Wiz, and i've recompiled it for the caano. It includes 'scp' so you can use the dropbear server to transfert files (using scp with termlua2x from caano side, or scp / winssh from your PC side).

That's what i'm using to dev on the caano, to transfert cross-compiled binaries etc

Be careful, if you want to connect to your caano you must use the -t option no to launch a login shell or it will relaunch the menu etc and make a big mess on your caano session. The following command should work properly :

```
ssh root@caano_ip_address -t "/bin/sh"
```

Here is a full working binary version :
caano-dropbear-0.52-bin.zip

And here is the source code :
caano-dropbear-0.52-src.zip

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :
My forum on dcemu network or <http://www.gp32x.com/>.

Cool, I wasn't aware of the "-t" option. Thank you for the recompile too.

glad to see you find it helpful,

Cheers, Zx
