Freewifi hotspot connection for caanoo

Hi All,

Here is a simple tool, that might be useful for french guys like me who want to connect to all "FreeWifi" wireless hotspots using their caanoo + official GPH wifi dongle (i've just received mine today).

This tool is based on my termlua2x fixed version (see my blog for other details) and a recompilation of the famous wget command line browser.

Once you're connected to the FreeWifi hotspot (using GPH menu) you need to enter identification login/password. This simple tool will do it for you. You just need to modify the config.txt file with your personnal account settings.

This set of tools + shell script might be modified to be used with other internet providers that offer such wireless connection feature.

Binary version :
caanoo-freewifi-bin.zip

  Enjoy,

     Zx

If you want to discuss on this homebrew, you can do it here :
My forum on dcemu network or http://www.gp32x.com/.
