### **Caanoo-THOM: A T07-70 emulator for Caanoo v1.1.0**

Hi All,

Thom is one of the best emulator of the Thomson T07 home computer running on MacOS, Windows and Unix.

It has been initially written by Sylvain Huet in 1996 (see <http://www.sylvain-huet.com>), then Eric Botcazou (see <http://nostalgies.thomsonistes.org/>) continued this project and added many new features.

Here is a port on Caanoo of version that i had previously ported to Wiz, Gp2X and PSP.

How to use it ? Everything is in the README.txt file.

If you're looking for games and software have a look here :  
to7-70 games

Here is a full working binary version :  
[caanoo-thom-v1.1.0-bin.zip](#)

And here is the source code :  
[caanoo-thom-v1.1.0-src.zip](#)

Enjoy,

Zx.

If you want to discuss on this homebrew, you can do it here :  
My forum on dcmu network or <http://www.gp32x.com/>.
